

How HTML can refer to other resources

Just a few examples

- ``
- `<script src=...>`
- `<link rel="stylesheet" href=...>`

JavaScript in web pages is security-limited

- ✓ Read what the user types **into this page**
- ✓ React to keypresses, mouse clicks, mouse movement **in this page**
- ✓ Modify **this web page**
- ✓ Send data to / receive data from **this site's** web server
