

Recap

What happens in the front end

We get to write the software on both sides:

- in the front end:
 - we can *only* use JavaScript
 - we can do things like manipulate the web page, or make a request to the server

Recap

What happens in the back end

We get to write the software on both sides:

- in the back end:
 - the primary goal is to send back a response for each HTTP request
 - we can use any language we like (but we'll be using JavaScript)
 - we can also do things like read and write files (on the server), or talk to a database, or to another server
